

IILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

Ethical Hacking

Virtual Internship

AICTE – EduSkills Virtual Internship Program | Supported by EduSkills Academy

Akshay Pandey

Roll No. 2410030690 | B.Tech CSE

April – June 2026

Akshay Pandey

B.Tech CSE • Batch 2024-2028

ABOUT THE STUDENT

Candidate Profile

Roll Number

2410030690

Institute

IILM University, Greater Noida, U.P.

Programme

B.Tech CSE, Batch 2024–2028

Internship Domain

Ethical Hacking (English Language)

Duration

8 Weeks | April – June 2026

ABOUT THE PROGRAM

EduSkills, AICTE & the National Internship Portal

EduSkills Academy is an organization working under the theme “Nation Building Through Skills.” It partners with the All India Council for Technical Education (AICTE) to run the AICTE – EduSkills Virtual Internship Program, for the Ethical Hacking track under the patronage of the AICTE National Internship Portal. EduSkills designs an industry-aligned curriculum that helps engineering students build a practical understanding of cybersecurity fundamentals and ethical hacking practices.

AICTE Patronage

Run under the AICTE National Internship Portal

EduSkills Academy

“Nation Building Through Skills” – the program's guiding theme

Structured Curriculum

Weekly modules, quizzes, and a Final Assessment Test

PROBLEM STATEMENT

From Theoretical Security to Hands-On Practice

Although many engineering students study the theoretical foundations of networking and computer security during coursework, very few get structured, hands-on exposure to the actual practice of ethical hacking – the lawful identification of vulnerabilities using an attacker's techniques, but with permission and for defensive purposes.

This internship addressed that gap — practically learning the full ethical hacking workflow:

What the Internship Set Out to Achieve

Security Fundamentals

Understand the core concepts, terminology, and legal/ethical framework of security testing

Footprinting & Recon

Learn passive and active techniques for gathering information on a target

Scanning & Enumeration

Identify live hosts, open ports, and running services using scanning tools

System Hacking

Understand password attacks, privilege escalation, and system-level vulnerabilities

Web App Security

Identify OWASP Top 10 vulnerabilities at a conceptual and applied level

Vulnerability Assessment

Carry out a basic vulnerability assessment and suggest fixes

The Toolkit Behind the Internship

TCP/IP & Ports

Networking fundamentals

Nmap

Host & port scanning

Recon Techniques

Passive & active footprinting

Vuln. Analysis

Weak configs, outdated software

Web App Basics

Auth flaws, injection concepts

Cryptography Basics

Core cryptographic concepts

EduSkills LMS

Structured modules & assessments

Local Test Lab

Isolated, deliberately vulnerable app

From Reconnaissance to Remediation

1

Information Gathering Layer

Passive & active reconnaissance to collect information about a target

2

Scanning Layer

Identifying live hosts, open ports & services with basic scanning tools

3

Vulnerability Identification Layer

Analysing gathered information to spot weaknesses or misconfigurations

4

Reporting Layer

Documenting findings clearly, as in a professional pentest report

5

Assessment Layer

Weekly quizzes and a Final Assessment Test tracking progress

The 8-Week Learning Journey

1

Introduction to Ethical Hacking

Infosec overview, terminology, legal/ethical framework

2

Footprinting & Reconnaissance

Passive & active info gathering techniques

3

Scanning Networks

Live hosts, open ports & services

4

System Hacking Concepts

Password attacks, privilege escalation

5

Malware Threats

Viruses, worms, trojans, ransomware

6

Social Engineering & Sniffing

Phishing, pretexting, network sniffing basics

7

Web App & Network Security

Common web vulnerabilities & countermeasures

8

Cryptography & Security Policies

Crypto basics & organisational security policy

EXPECTED OUTCOMES

Skills & Capabilities Gained

- ✓ Ability to explain the fundamental concepts and legal/ethical boundaries of ethical hacking
- ✓ Practical understanding of the basic phases of hacking and common vulnerabilities
- ✓ Familiarity with basic reconnaissance and scanning tools used in security assessments
- ✓ Basic awareness of malware, social engineering, and web-application security concepts
- ✓ Hands-on exposure to conducting a simple vulnerability assessment and documenting findings responsibly
- ✓ Successful clearance of all weekly assessments and the Final Assessment Test, resulting in Grade “A”

CERTIFICATION

Successfully Completed

GRADE

A – Very Good
